

NIKIT RAUNIYAR

Email: rauniyarnikit@gmail.com | Location: Melbourne, Australia

A

Full Stack Software Engineer with 3 years of experience designing, developing and deploying scalable, high performance web applications. Proven expertise in backend engineering, API development and modern frontend frameworks with a strong focus on cloud native solutions and system reliability.

- Front End: JavaScript, TypeScript, React.js, Next.js, Tailwind CSS, Responsive UI
- Back End: Node.js, Express.js, TypeScript, RESTful API Design
- Databases: MongoDB, MySQL, PostgreSQL
- API Integrations: RESTful API Design, Stripe, Square, OAuth, Auth, Social Logins
- Cloud: DevOps, AWS, IAM, EC2, S3, Fargate, Docker, Kubernetes, CI/CD Pipeline
- Version Control: Git, GitHub, GitLab, Agile Scrum, Project Management

DCA

Bachelor of Computer Applications (BCA) | [Melbourne Polytechnic](#) | Preston, Australia | Graduated: 2021

Key Subjects: Database Systems, Object-Oriented Programming, Web Development, Project Management, Business Analysis

Achievements: Higher Distinctions (HDs) and Distinctions (Ds) out of 5 subjects

C

[Booop](#), Doncaster VIC, Australia | **Present**

Key Achievements & Responsibilities

- Architected and implemented a scalable backend services, REST APIs and optimized database schemas using Node.js, Express.js, TypeScript, MongoDB, improving system reliability and reducing latency.
- Developed and optimized responsive front-end applications using React.js, Next.js, TypeScript and Tailwind CSS, enhancing page load performance and boosting user engagement.
- Implemented secure authentication, authorization (RBAC) and integrated third-party APIs (Stripe, Auth0, Brevo) enabling seamless payments, authentication and email automation at scale.
- Built automated unit and integration test suites across the stack applications, improving QA efficiency and reducing production issues.
- Deployed and maintained cloud-native applications on AWS using Fargate, S3, and Docker via CI/CD pipelines, ensuring zero-downtime deployments.

Objective: Design a full stack self checkout system that enables retailer clients to connect their Square accounts allowing end users to place orders through Booop with transactions handled on Booop and orders seamlessly submitted to the client's Square KDS for streamlined processing

Tools: Node.js, Express.js, React.js, TypeScript, MongoDB, Square API, OAuth with PKCE, REST APIs

Duties: Designed and implemented frontend interfaces for retailer clients to securely connect their Square accounts via PKCE based OAuth authentication enabling seamless onboarding and configuration. Built backend services with Node.js and Express.js to handle order submission, transaction processing, and integration with Square KDS endpoints ensuring real time synchronisation of order data. Implemented robust logic to manage multi tenant client connections, order routing, and error handling maintaining system scalability and fault tolerance.

Outcome: Delivered a full functional system where retailer clients can onboard their Square accounts and users can place orders that are processed on Booop and simultaneously streamed to the client's Square KDS. Implemented two way communication when staff completes an order in Square webhooks are sent to Booop enabling real time order status updates and synchronisation. The system ensures secure transactions, real time processing, and streamlined operations for both parties.
