

NIKIT RAUNIYAR

Email: rauniyarnikit@gmail.com | Location: Melbourne, Australia

SUMMARY

Full-Stack Software Engineer with 4+ years of experience designing, developing, and deploying scalable, high-performance web applications. Proven expertise in backend engineering, API development, and modern frontend frameworks, with a strong focus on cloud-native solutions and system reliability.

SKILLS

- Front-End: JavaScript, TypeScript, React.js, Next.js, Tailwind CSS, Responsive UI
- Back-End: Node.js, Express.js, TypeScript, RESTful API Design
- Databases: MongoDB, MySQL, PostgreSQL
- API & Integrations: RESTful API Design, Stripe, Square, Brevo, OAuth 2.0, Webhooks, Sockets
- Cloud & DevOps: AWS (IAM, EC2, ECS, Fargate), Docker, CI/CD Pipeline
- Version Control & Collaboration: Git, GitLab, Agile/Scrum, Project Management

EDUCATION

Bachelor of Information Technology (Software Development) February 2019 – December 2021
[Melbourne Polytechnic](#), Preston, Australia

Key Subjects: Database Systems, Object-Oriented Programming, Web Development, IT Project Management, Business Analysis.

Achievements – 20 Higher Distinctions (HDs) and 4 Distinctions (Ds) out of 24 subjects

EXPERIENCES

Software Engineer May 2022 – Present
[Booop](#), Doncaster VIC, Australia

Key Achievements & Responsibilities

- Architected and implemented scalable backend services, REST APIs, and optimized database schemas (Node.js, Express.js, TypeScript, MongoDB), improving system reliability and reducing latency by 25%.
- Developed and optimized responsive front-end applications with React.js, Next.js, TypeScript, and Tailwind/Material UI, enhancing page load performance and boosting user engagement.
- Implemented secure authentication/authorization (RBAC) and integrated third-party APIs (Stripe, Auth0, Brevo), enabling secure payments, authentication, and email automation at scale.
- Built automated unit and integration test suites across full-stack applications, improving QA efficiency and reducing production issues by 30%.
- Deployed and maintained cloud-native applications on AWS (ECS Fargate, ECR, Docker) via CI/CD pipelines, ensuring zero-downtime deployments across Dev, Staging, and Production environments.

Software Developer Intern July 2021 – Oct 2021
[BrandoPC Solutions](#), Docklands VIC, Australia

Key Achievements & Responsibilities

- Built responsive web pages using React.js to improve the user experience across devices.
- Contributed to backend development using Django and PostgreSQL to manage application data.
- Assisted with implementing OAuth to ensure secure user authentication and login.
- Collaborated with Agile teams using Git for version control and code reviews.
- Refactored older code to improve maintainability and follow modern coding standards.

PROJECTS

Booop Self-Checkout with Square Integration

Melbourne, VIC

- Objective:** Design a full-stack self-checkout system that enables retailer clients to connect their Square accounts, allowing end-users to place orders through Booop, with transactions handled on Booop and orders seamlessly submitted to the client's Square KDS for streamlined processing.
- Tools:** Node.js, Express.js, React.js, TypeScript, MongoDB, Square API, OAuth 2.0 with PKCE, REST APIs
- Duties:** Designed and implemented frontend interfaces for retailer clients to securely connect their Square accounts via PKCE-based OAuth 2.0 authentication, enabling seamless onboarding and configuration. Built backend services with Node.js and Express.js to handle order submission, transaction processing, and integration with Square KDS endpoints, ensuring real-time synchronization of order data. Implemented robust logic to manage multi-tenant client connections, order routing, and error handling while maintaining system scalability and fault tolerance.
- Outcome:** Delivered a fully functional system where retailer clients can onboard their Square accounts, and users can place orders that are processed on Booop and simultaneously streamed to the client's Square KDS. Implemented two-way communication: when staff completes an order in Square, webhook events are sent to Booop, enabling real-time order status updates and synchronization. The solution ensures secure transactions, real-time processing, and streamlined operational workflows.

CERTIFICATIONS

- [AWS Certified Cloud Practitioner](#) (09/2022 - 09/2025)
- [SAS - Melbourne Polytechnic Academic Specialisation in Software Development Analytics](#) (02/2022 - Present)
- [Elements of Artificial Intelligence](#) Certification of Exam Completion by University of Helsinki & MinnaLearn Finland - (06/2018 - Present)
